Dedicated website – No

Organisation webpage – No

Centralised portal – No

Objectives/Success Criteria – No

Closedown/final report – No

Open-source data – No

Peer-reviewed academic output (Primary Subject / Referenced) - 0 / 1

Brochures/Case Studies/Videos – Yes

On-line major conference/event presentations - 1

Dissemination Event / Output available – 0 / 0

Follow-on project – No / Yes

### Consumer Engagement

Consumer Participation – Yes

Consumer Feedback – No

### Output Summary

Progress reports – No

Detailed and objective final report – No

Project method detailed – Limited

Performance to objectives detailed – No

Lessons learned identified – Limited

Policy/Regulation implications reviewed – Yes

### Outcomes vs. Objectives/Targets

Performance to objectives – Not defined

### Key Findings

- It is technically possible to remove a significant heat and cooling load from river water without significant environmental impact.
- No Environment Agency licensing mechanism existed to allow water to be extracted and then returned to the river.
- Consumers require education when switching from gas boilers to lower capacity heat pumps that need to be run more constantly.
